✔   1 / 1
     point

8.
In the request/response cycle, when the browser sends form data using a POST request, how are the names and values sent to the server?

○   As parameters on the URL that is part of the POST request

Routing

Practice Quiz, 11 questions

○ After the browser sends the POST request, request headers, and a blank line

Correct

○ The browser sends the POST request on one server connection and makes a second connection to send the POST data

○ After the browser sends the GET request, request headers, and a blank line

○ The server makes a network connection back to the browser and retrieves POST data if it needs the POST data
